

I am working with a client in Appleton, WI who is looking to add two security engineers to their team. They are looking for a 4 year degree and one to three years of IT security experience. While IT security certifications are a plus they are not required. The client is focused on becoming PCI compliant. The salary range is between 60K to 75K with a great benefit package. This is a very hands on role and we need someone with great communication who can work well with teams. If you have Identity Management experience this is also a plus. They will be working with an integration partner as well as the internal Management team on achieving the compliance timeline. Please contact me below for more details on the project. If you have an interest in the growing field of IT security please respond today.
